

POWDER COATING

Benefits of Powder Coating:

Powder coating applies a layer of free-floating, dry organic powder to metal. This powder polymerizes to form a thick layer that protects against splintering and scratching. Powder coating is long-lasting and resists chips and scratches. Compared to traditional finishing, powder coating is one of the longest-lasting and most durable options for nearly any type of metal. Powder coating also offers a wide range of customization.

Powder Coating at Axis Fabrication:

Building upon our foundation of precision fabrication and machining, Axis offers in-house finishing services for your standard and non-standard parts. With Axis Fabrication's powder coating service, you can provide protection and a high-quality appearance to your parts.

- **Variety of Finishes:**
 - Matte
 - High-Gloss
 - Textured
- **Choose from 20+ Colors:**
 - Neon
 - Metallic
 - Veining
